

APPENDIX:

The Appendix includes the following item(s):

- a new Abstract of the Disclosure

ABSTRACT OF THE DISCLOSURE

Process for operating a security system, for the protection of persons and belongings, comprising a warning device (2) triggerable by a control unit (3), a unit (11) for activating a signalling device (7) and an element for unlocking an electrically controlled lock (5), this process consisting: - in activating a timeout unit when the control unit is invoked so as to engage a timeout interval (T1), - in activating the element for unlocking the lock when the activation unit is invoked during the timeout interval (T1), and in disabling the signalling device during the timeout interval (T1) so that this signalling device can be activated only if the activation unit is invoked outside of the timeout interval (T1).
